

Your individual Innovation Workshop

In a workshop tailored to your interests, we help you to identify the potential for the development of products and production concepts in specific technologies and markets

Your individual Innovation Workshop

What additional products can you offer with your technologies?

What potential for improvement exists for your products?

Would you like to review your technology or product portfolio?

Which new production technologies could be an enrichment for your product portfolio?

Our Offer

Identifying your needs and translating them into relevant criteria for the development of product and production concepts

Development of ideas for innovations, creation of initial concepts and discussion of necessary next steps or development roadmaps

Your Benefits

- Insights into new solutions according to the latest state of the art
- Identification of innovative approaches and product improvements
- Cross-check with experienced branch insiders
- Roadmap for realizing innovative potential

Our Expertise

As a one-stop shop for market and technology know-how, the AZL brings together experts and decision makers from academia and industry of all positions in the value chain, to support business and technology development. Located in the heart of one of the leading high-tech ecosystems, RWTH Aachen University, AZL assists in the development, benchmarking and improvement of composite-based multi-material technologies. In addition, the AZL Partnership frameworks offer access to an open innovation network of more than 80 international companies to find solutions for industrial implementation and establishment of lightweight technologies in the market.

Our Assets for individual Innovation Workshops

The AZL cross-industry expert team provides market insights and technology know how. Experienced part designers and process specialists consider requirements and discuss multi-material component and process concepts with you.
